

Lumbini Engineering College

(Final Internal Exam)

BE Computer (7th semester)

FM-100

Subject: - Cloud Computing

PM-45

1. a) Define cloud computing? Explain history of cloud computing with common characteristics. (7)
b) Discuss the challenges and security issues in cloud computing environments. (8)
Or
What are the advantages of cloud network? Mention different types of cloud network. (8)
2. a) Define virtualization and Hypervisor? Explain advantages and disadvantages of Type 2 Hypervisor. (7)
b) Differentiate between parallel computing and distributed computing. Mention their advantages and disadvantages. (7)
3. a) What is cloud storage? Differentiate between cloud computing and virtualization. (7)
b) Briefly explain about IaaS, SaaS, PaaS and DBaaS cloud service models. (8)
4. a) What is grid computing? Differentiate between grid computing and cloud computing. (7)
b) Explain the 7 Dimensions of cloud security. (8)
5. a) What is identity and access management? Describe its architecture. Depict the procedure to carry out IAM. (8)
b) What are the different components of Docker? Explain its need and uses. (7)
6. a) What is autonomic computing? Explain with its applications and advantages. (7)
b) Compare and contrast the physical clusters and virtual clusters. How resource management could be carried out in VM? (8)
7. Write short notes on any two (5X2=10)
a) VM migration attack.
b) Para virtualization.
c) DBaaS.
