

INTERNSHIP SUMMARY PRESENTATION AT

By Hemanta Pokharel

Today's presentation

- Introduction to Docsumo
- Problem Statement
- Objectives
- Projects involved
- Activity Performed
- Conclusion

Introduction to Docsumo

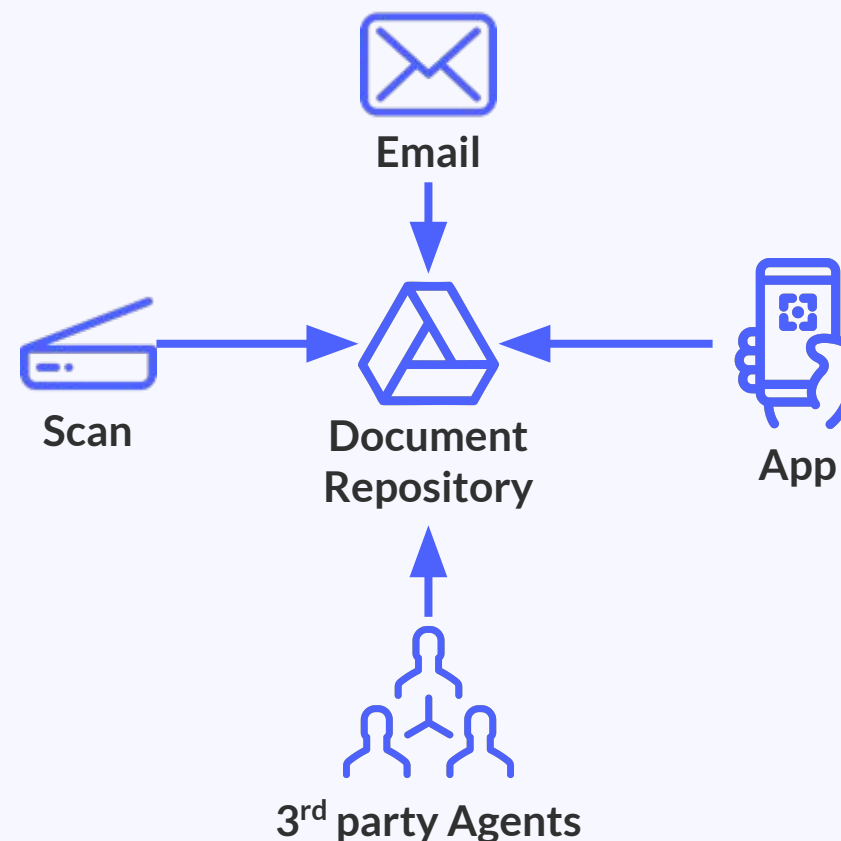

- Incorporated in December 2018
- Helps industries with simplified data extraction for different document types
- Based on Nepal and India
- Serving over 20 large financial services firms in USA, Europe & India

Problem Statement

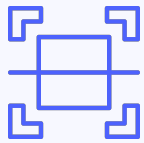

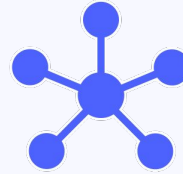

A large organisation receives 80% of the data in unstructured documents, even though it's digital

- Documents processed manually or semi-automatically.
- Massive back office costs & need to perpetually hire & train data entry staff.
- Long customer onboarding time & poor experience.
- Inaccuracy with manual data entry leads to rework costs and compliance issues.
- Fraudulent documents don't get detected in time.
- Huge burden & waste of time for heads of technology & operations.

Objectives

Go beyond template OCR &
enable 100% automation along with analytics & fraud check

Document Capture

Capture data from any document in real time with 99% accuracy.

Data Analytics

Get key parameters to calculate disposable income & claim amounts.

Fraud Detection

Check for over 20 factors such layering, incorrect publisher, font change, etc.

Audit Trail

Get time stamped data about what was captured & from where.

Project Involved

Extract Data from any type of document
with layout agnostic AI engine

Invoices

Receipts

KYC
Documents

Bank
Statements

Tax
Documents

Health
Records

Purchase
Orders

Custom
Model

End-to-end solution provided by Docsumo

Full automation

Works for 100% document volume. No need for other vendors

99%+ Accuracy

No need for inhouse verification team.

Really Fast Processing

Get data back in less than 1 min for straight through processing & 30mins for human verification

Fraud Detection

Runs 20+ checks to ensure that the document is not tampered in any way.

Txn Categorization

Granular categorization enables better unwriting models

No Template Setup

Works out of the box without the need to maintain template directory

Custom AI Models

Learns from customer data to create custom deep learning models

Mobile Capture

SDK enables better image capture & API integrates with any tech stack easily

Activity Performed

Backend API
Development

API Maintenance

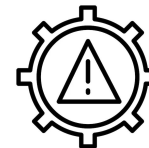

Performance

System Monitoring

Incident Response

Process Flowchart After Docsumo Implementation

CONCLUSION AND OUTCOME

Language and Framework

- Python
- Flask
- Celery Tasks

Hosting

- Gcloud
- Kubernetes
- CloudRun

Database

- Mongodb
- Redis

Soft Skills

- Problem Solving
- Communication
- Time management

Tools

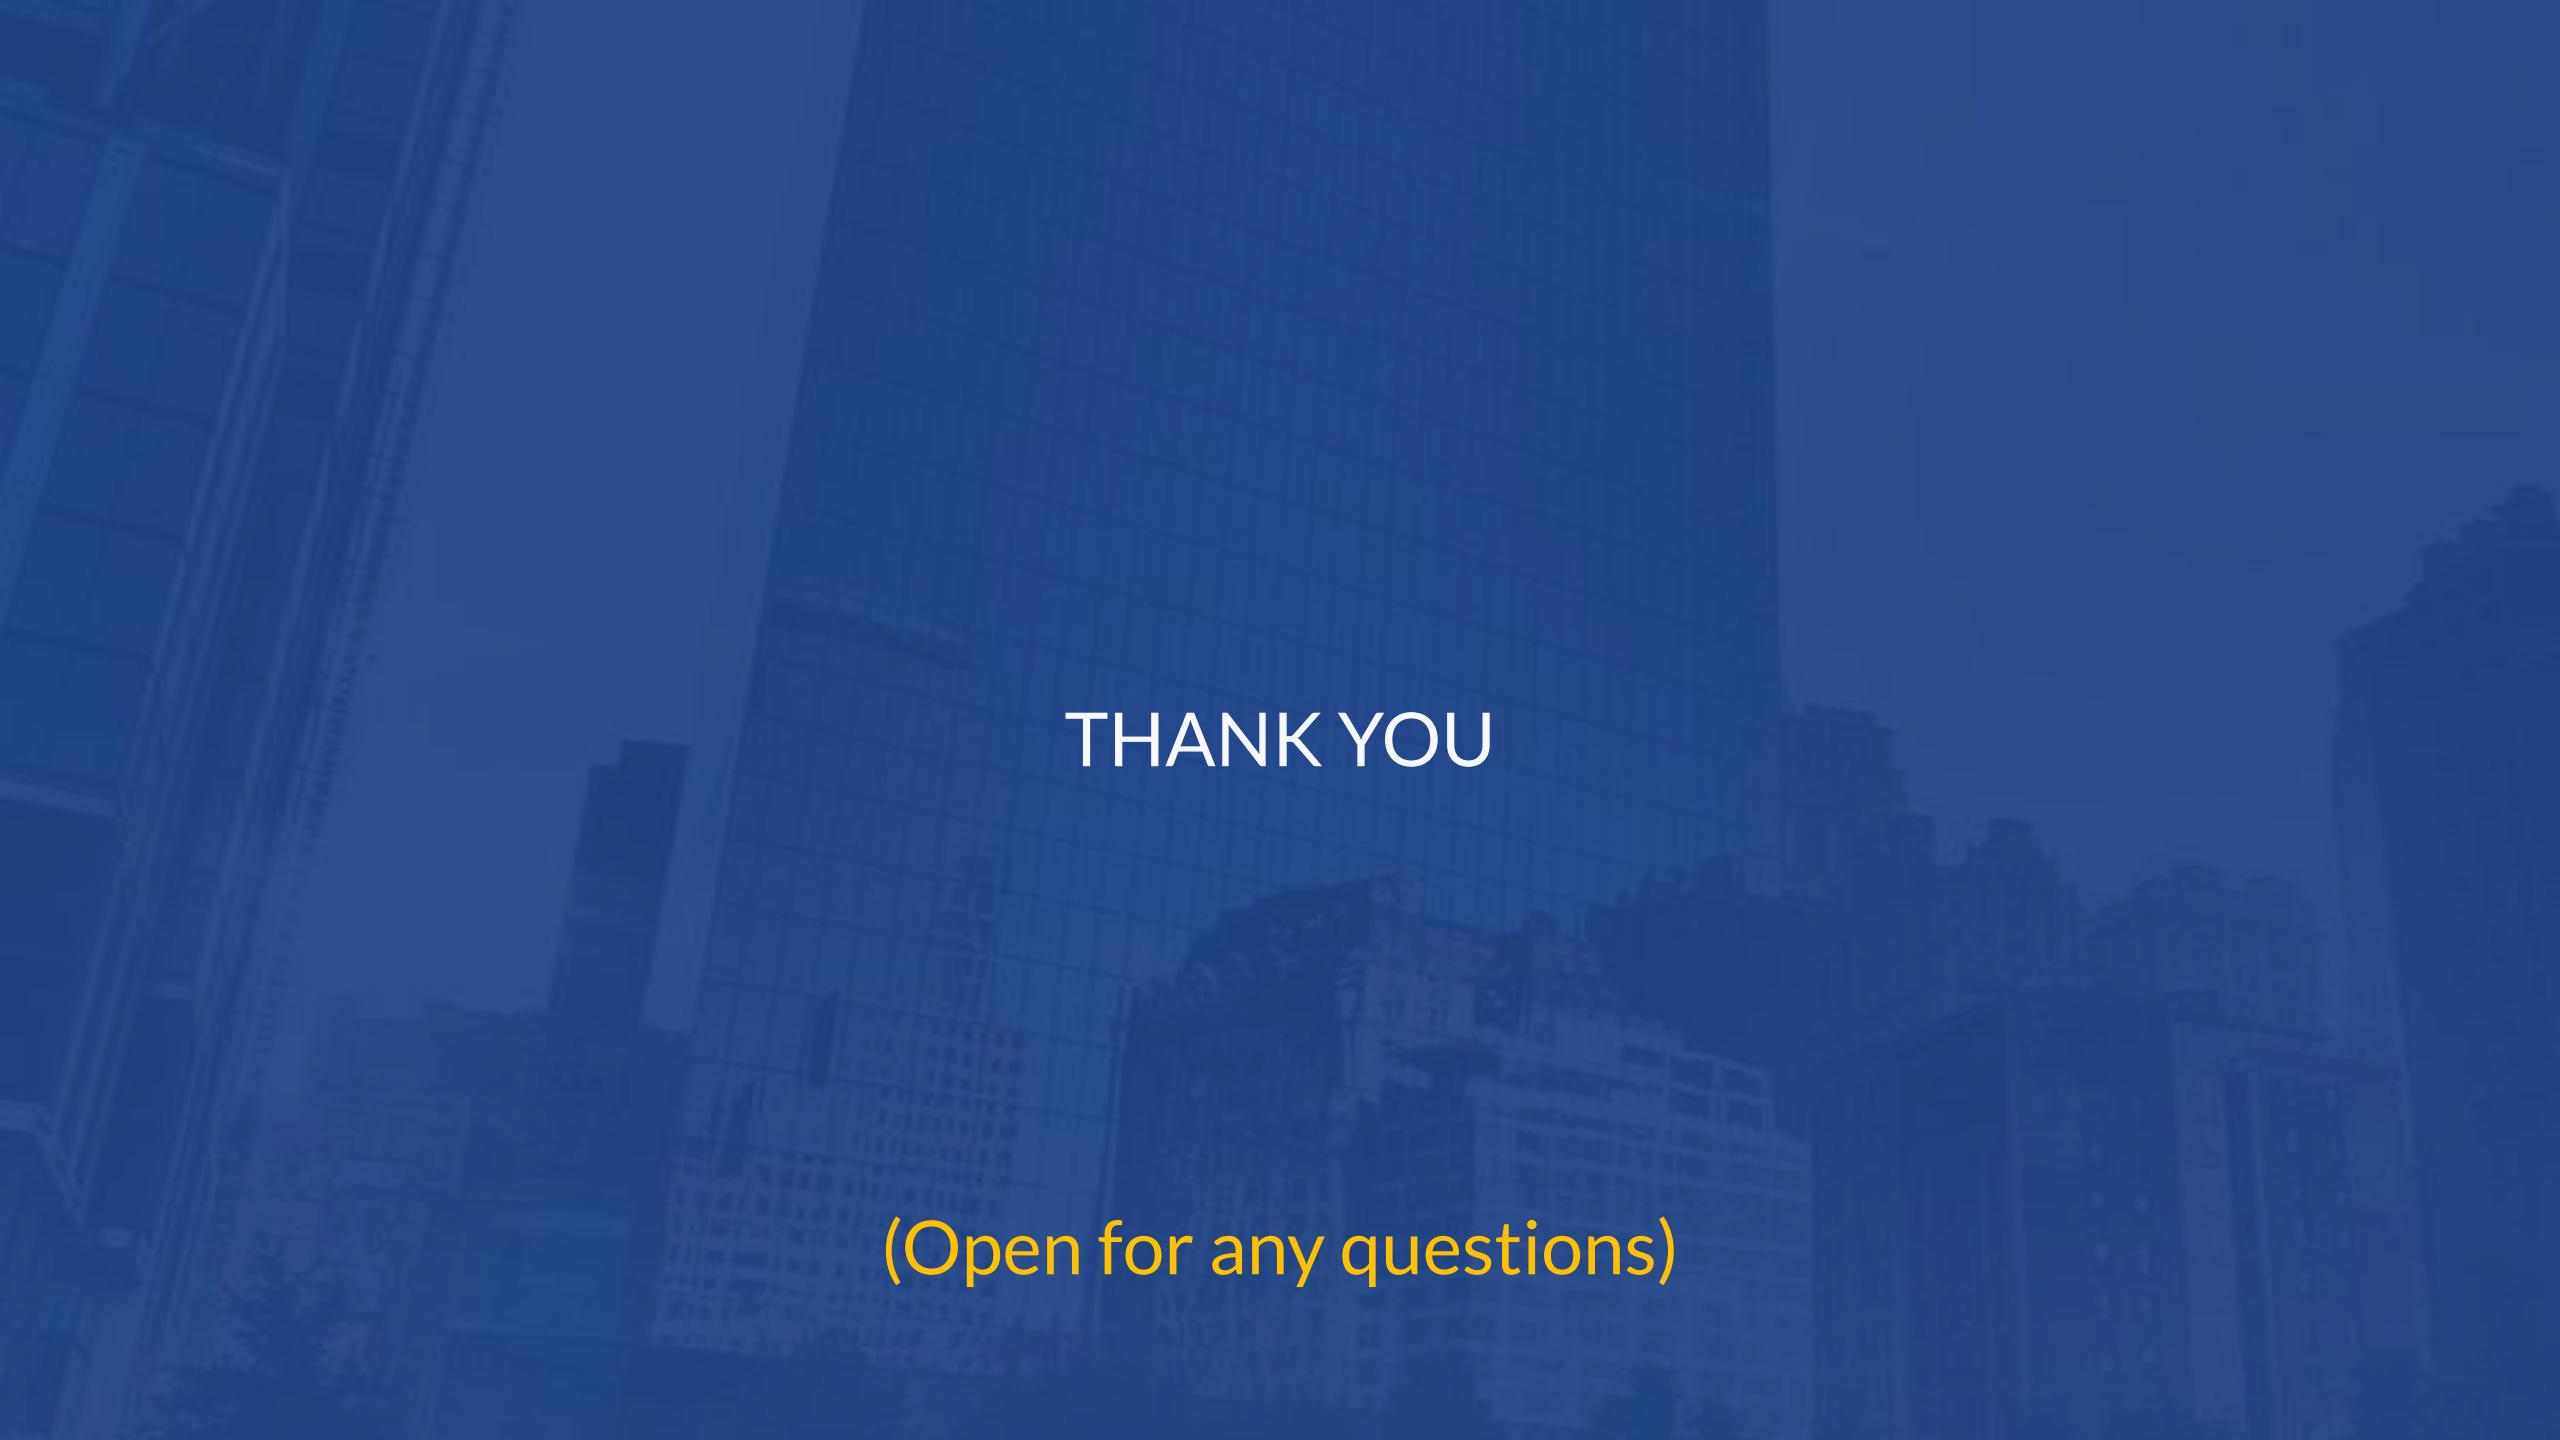

- Docker and compose
- Helm and Kubectl
- K9S

MONITORING

- Sentry
- Gcloud Error Reporting
- Gcloud Metrics

THANK YOU
